

LodgingControls Introduces Panic Alert Button for Hotel Staff on their Mobile Operating Platform (M.O.P)

LodgingControls understands the value of helping hoteliers provide additional safety measures for their staff which gives hotel employees a sense of security while working.

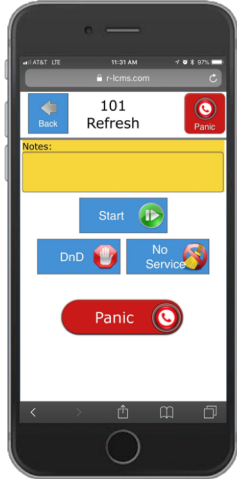

Whatever screen the hotel staff is working on, they will be able to access the panic alert button without having to jump screens to send out an alarm.

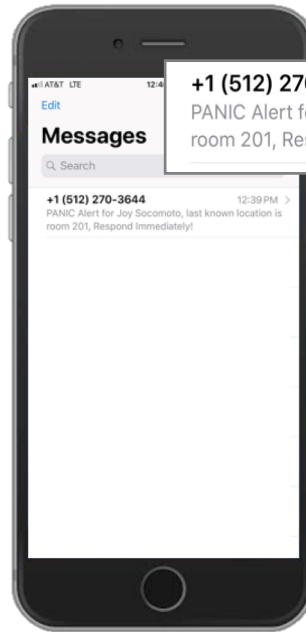

Login Screen

Assignment Screen

Tasks Screen

The front desk and activated cellular devices will receive a telephone call stating the alert, who activated it, and their last known location.

All devices will receive a text or pop-up indicating the last known location of the staff member who initiated the alert.

PANIC Alert for Joy Socomoto, last known location is room 201, Respond Immediately!

Based on the user settings, the complete text will be shown after opening the text message.

System Requirements:

- Latest version of Chrome (60 and above)
 - Generates a push notification to non-activated devices only utilizing the property's Wi-Fi.
- Set up a generic email to be used in each staff member's profile.
 - Used to send a push notification to all non-activated devices
